Primary Responsibilities:

- Identify opportunities for improvement in equipment efficiency, material utilization, and maintenance procedures
- Troubleshoot conveyor systems, mixers, forms, and equipment throughout the plant
- Analyze equipment maintenance history for the purpose of identifying and communicating design and operational weaknesses requiring improvement
- Collaborate with Production and Maintenance personnel to plan, schedule, and execute maintenance
- Work collaboratively with operators to troubleshoot issues, reduce downtime, and address relevant safety and quality concerns
- Assist in maintaining the work order process, work order backlogs, and the computerized maintenance management system
- Assist in the coordination of management of vendor delivered services
- Assist with inventory management of critical spare parts and consumables
- Ensure compliance to internal and external policies, procedures, and regulations with respect to the Health and Safety of the maintenance employees and site contractors

Skills & Assets:

- Strong leadership skills focused on driving quality, cost, service, and safety
- Strong welding and fabrication skills is an asset
- Knowledge of hydraulics, pneumatics, and power transmission
- Excellent communication skills and ability to work effectively with diverse teams
- Strong analytical, organizational, and problem-solving skills
- Detail oriented and highly conscientious when performing duties
- 3 to 5 years' experience in related industrial environment is considered an asset
- Mechanical, Electrical Engineering Technologist, Trades certification or equivalent is considered an asset
